

PREPARE FOR NEXT SEASON: ORDER CUTTINGS NOW

Elderberry Plant Cuttings - 100 or 1000 bulk discount lots available (PLEASE NOTE - CUTTINGS WILL NOT SHIP UNTIL APROX. JAN 10TH)

You can order as many or as few as you would like. You may Mix-N-Match the varieties on the order form. The bulk discount will be applied automatically when your order reaches 100. If you wish to order 1000 or more, please choose the bulk option.

Available Varieties include:

- ***Adams 2-- Early ripening with very large clusters of purplish/black berries. Sweeter than most elderberries and somewhat self-pollinating. One of the oldest cultivars from New York. Tallest with excellent yields. Indeterminant.***
- ***Bob Gordon -- Larger berry that has yielded nearly triple that of Adams 2. Some help from bird damage due to recumbent cymes, down-ward facing, when berries ripen. Number one producer in trials. Sought out by winemakers for its higher brix measurement. Determinant.***
- ***Eridu -- Native to Missouri River Region. Native berries collected from Eridu Farms. Extremely vigorous, uniform clusters of medium size berries, very sweet, productive, and prolific multiplier.***
- ***Ranch -- A vigorous producer that is first to reach bud break in spring and is the latest to ripen. A hardy short plant, most tolerant to harsh conditions. The stockiness provides a lower fruiting canopy. Single stemmed. Tends to grow upright and is not bushy. Grows well on less fertile soils. Determinant.***
- ***WyldeWood 1 -- Tends to grow three umbrels on each stem. Awarded second place in university trials, showing potential of 12,000 pounds per acre. First varietal released by the University of Missouri. RHH primary commercial variety. Unique processing properties and high yields make it most popular. Indeterminant.***

Reminder!

The very best time to take a soil test to determine fertility levels for Spring feeding is right now --
before the ground freezes!
